

e-learning

## **Managing agile teams**

Your team is well occupied with a major project when a customer enquiry arrives that needs to be dealt with. At the same time, the head of department wants information "quickly". The fast pace and increasing complexity poses many challenges for teams and demands focus. Agile methods – used sensibly – can contribute significantly to increasing efficiency, which is why they are being used more and more in today's working world. In some organisations, agile methods are used exclusively. In others, mixed forms exist in which standard agile methods such as SCRUM, Design Thinking, Lean Start-up and others are added. In any case, you as a manager play an essential role in both the selection and the use of agile methods. You define and communicate the framework conditions, the use of resources and the interaction with other projects and are thus responsible for the overall success of your team's agile projects. There are challenges lurking in many places, but you can also operate the levers to steer the agile project in a successful direction.

In this e-learning, you will learn what these challenges are and above all, which measures will make your agile projects successful. You will learn the most important leadership aspects around the introduction and implementation of projects with agile methods in order to accompany agile projects in your organisation even more successfully in the future.

**Booking Number: 31214** 

Group of participants:

Managers who already use agile
methods or are planning to do so.

Duration: approx. 1,5 hours

Language: 💻 💥

Unit price:

€ 49,- zzgl. MwSt. | € 58,31 inkl. MwSt.

Package prices from 50 licenses on request

## **Learning objectives**

- ✓ You can consciously shape your role as a manager in the introduction and implementation of agile projects.
- ✓ You are able to select suitable methods for your projects.
- You can actively involve colleagues and employees in your projects and make them supporters.
- ✓ You can use measures from the areas of work organisation, change management and communication in a targeted way to ensure successful projects.
- You are able to win over and involve top management in your agile projects.

## **Contents**

Role as a manager in the introduction and implementation of agile projects

Conscious choice of methods appropriate to the project
